

```

/*
 * Stylesheet to define font size and layout elements for the Generic Semester Report.
 * Properties defined in this stylesheet may only be modified. Removing properties will cause the report to Error or function incorrectly.
 *
 * Properties and correct syntax guide:
 *
 * height:                100pt;                (In Points (pt). Typically used for defining max height of an embedded image OR a bounding
 * width:                 100pt;                (In Points (pt). Typically used for defining max width of an embedded image OR a bounding
 * padding-top:           5pt;                  (In Points (pt). Typically used for defining the top padding of content such as table content)
 * padding-bottom:       5pt;                  (In Points (pt). Typically used for defining the bottom padding of content such as table
 * padding-left:          5pt;                  (In Points (pt). Typically used for defining the left padding of content such as table content)
 * padding-right:        5pt;                  (In Points (pt). Typically used for defining the right padding of content such as table content)
 * font-size:            10pt;                 (In Points (pt). Size of font)
 * font-weight:          bold;                 (Defined as text. Font Weight (normal or bold))
 * font:                 Arial;                 (Defined as Text. Case sensitive Font Name)
 * color:                #000000;             (Color in HEX. Color of Font)
 * background-color:     #CCCCCC;             (Color in HEX. Color of background. Typically used for Table background colors).
 * left:                 100pt;               (In Points (pt). Typically used for positioning elements at exact locations. typically used things
 * bottom:               100pt;               (In Points (pt). Typically used for positioning elements at exact locations. typically used things
 * border:               1px solid #000000;   ((1) Width in Points (currently 1pt ONLY). (2) Line type. (currently solid or none) (3) Line
 * border-left:          1px solid #000000;   ((1) Width in Points (currently 1pt ONLY). (2) Line type. (currently solid or none) (3) Line
 * border-right:         1px solid #000000;   ((1) Width in Points (currently 1pt ONLY). (2) Line type. (currently solid or none) (3) Line
 * border-bottom:        1px solid #000000;   ((1) Width in Points (currently 1pt ONLY). (2) Line type. (currently solid or none) (3) Line
 * border-top:           1px solid #000000;   ((1) Width in Points (currently 1pt ONLY). (2) Line type. (currently solid or none) (3) Line
 * text-align:           left;                 (Horizontal Alignment (left, center, right, justified)).
 * vtext-align:          top;                 (Vertical Alignment (top, bottom, middle)).

```

```

* content: "User defined text" (The content tags can be used to place additional wording on the coverpage. If not required
leave empty quotes).
* text-transform: uppercase; (Can be used to force text to print in a certain case. (uppercase or lowercase))
* font-style: italic; (Can be used to force text to print in italics (italic, strikethru, underline))
*
* Each Style items properties are defined between the open and close curly brackets.
*
* Any time an @ symbol is used followed by a name, the property will be substituted for a variable defined in the program.
* eg. @borderStyle would be set to "none" or "solid" depending on program logic.
*
* Overriding allows for elements of a style to be overwritten in child or in the same style. Useful when using "Selectors"
*
* Square brackets are used as "Selectors" this allows styles to be disabled or enabled based on conditions in properties defined in the program. eg
.title .logoImage [image2path=""]
* This would indicate that this style may override properties in the style with the same name or create a new style where the image2path is equal to an
empty string.
*
* Properties ( Currently available for use in "Selectors" )
*
* reportFont Arial or )
* borderStyle (solid or none)
* image1path (unique location of the uploaded file, or empty string when not used)
* image2path (unique location of the uploaded file, or empty string when not used)
* expnotesPath (unique location of the uploaded file, or empty string when not used)
